The Labyrinth in Culture and Society: Pathways to Wisdom

Jacques Attali

North Atlantic Books, 1999

ISBN 1-55643-265-8

This book documents labyrinths down through the ages and puts them into perspective for the modern reader. Where did they come from, what did they represent, why were they abandoned in favour of straight lines and how that affected our thinking. This new millennium may see us develop a richer culture as we respond to the patterns that we have rediscovered in the labyrinth.

Stairways to the Stars: Skywatching in Three Great Ancient Cultures

Anthony Aveni

John Wiley & Sons, 1999

ISBN 0471329762

'What is the meaning of Stonehenge? Why was the elaborate Incan city of Cuzco built? What is the significance of the Great Pyramid at the ancient Mayan city of Chichen Itz?' These ancient structures have spellbound natives and tourists alike. This mysterious architecture points to a centuries-old search for celestial order. Anthony Aveni, a professor of astronomy and anthropology, takes us on a stimulating virtual tour of these legendary constructions. He describes how they were built and straightforwardly and often humorously critiques diverse theories attempting to explain their origin and function...Wonderfully written, the book's primary focus is the prominent role of astrology in the design and construction of ancient structures, and even entire cities.'

Peter Champoux proposes that "the living earth naturally expresses its energies and intelligence according to the same forms and patterns long known in the canon of sacred geometry". Furthermore human culture and history follow the lines of this living geometry. The author recognised the geometry inherent in the North Eastern United States and has identified how settlements and key events and sites link into this.

Living Energies

Gateway Books, 1996

This is an analysis of Viktor Schauberger's work with natural energy. VS (1885-58) worked as a 'forest-master' in the Austrian Alps when they were still a wilderness and, from his precise observations of Nature's processes, developed our understanding of the nature of water as the most important life-giving and energy-empowered substance on the planet. This books covers topics such as: water as a carrier of vital energy information, trees as biocondensers of energy between the deep earth and the sun, how self-cleansing rivers nourish the landscape, how the

future of the world depends on the replanting of *natural* forests, why soil fertility should be increased with energy, not chemicals, revolutionary agricultural implements, the invention of a free energy heater-cum cooler, jet engines and gravity-defying UFO-like machines and home power generators.

The Secret Language of the Stars and Planets: A Visual Key to the Heavens**Geoffrey Cornelius**

Chronicle, 1996

ISBN 0811812006

‘A fine generalist introduction to the metaphors of the sky. Generalist because it is concerned with more than western astrological symbols. ...The Secret Language of Stars and Planets, while rooted in the Western Zodiac takes a multicultural path beyond those borders. So all of the Planets are provided with some identifications from Chinese, Egyptian, Incan, Indian & Pre-Columbian cultures, though not in especially great detail. The really outstanding part of this book is the section on Sacred Alignments. The astronomical designs and spiritual purposes of twenty seven ancient sites are explored. In addition to the obvious ones like The Great Pyramid, Stonehenge and Avebury, the book explains the layouts of such far flung power centres as Hashihaka in Japan, Vijayanagara in India, the Cahokia mound complex in Illinois, the Chaco Canyon “Ancient Ones” are in the Four Corners region, and several South America Sites including Machu Picchu.’

The New View over Atlantis **John Michell**

Thames and Hudson, 2001

ISBN 0-500-27312X

This is one of the seminal geomantic masterpieces. There are two main parts to the book; part one covers landscape and part two looks at number. Landscape looks at leys and dragon lines (as well as dragon slayers) and serpent power in various parts of the world. Number looks at the use of number and measure in the ancient world, including an analysis of the proportions used in the Great Pyramid and how secret knowledge of such dimensions as the radius of the Earth and the Moon were worked into sacred geometry there as well as in the New Jerusalem, Stonehenge and Glastonbury. Can be heavy going if this is your first introduction but it's worth the effort.

**The Earth Spirit:
Its ways, shrines and Mysteries**

John Michell

Thames and Hudson, 1992

ISBN 0-500-81011-7

"The earth is a living creature, animated by a spirit that corresponds to the spirit in men. From the earliest times and throughout the greater part of history this has been the orthodox belief, and it was this belief that inspired the origins of science in the attempts of the first cultivators to adapt the roving ways of the earth spirit to the new settled style of life. This volume illustrates the natural shrines and channels of the earth spirit and the relics of the old, once universal science by which its powers were concentrated for the benefit of all life on earth".
